To whom it may concern

During 2004 I was in my second year of varsity and every day I suffered with head-aches or migraines. As my studies continued the head-aches and migraines got worse. After my first consultation at the head clinic, X rays were taken of my jaw and we discovered I had a Wisdom tooth growing in the wrong place. The tooth was removed and the head-aches improved. After I was fitted with my plate the head-aches improved considerably. 5 years later I still use my plate and my head-aches have improved to such an extent that some months I don't suffer at all. The head-ache clinic made a big difference in my life.

Regards
