Subject: Re: Testimonial

My migraine headaches were "terrorising" me since my car accident in 2003. I had been on every and any headache tablet and treatment possible and my situation was not getting any better.

I was finally prescribed IMIGRANE to take once a day on the onset of my migranes. At first I thought this was working until I started feeling numb on my left side of the body from head to toe. Also the tablets did not seem to help any more.

On Friday the 9th of September 2011, I had the mother of all migranes. I could not open my eyes and my head felt heavy, I was rushed to hospital and given an injection to ease the pain. In the waiting room, a certain lady approached my husband as I was not in a position to talk. She asked him to google The Headache Clinic and book an appointment as she had been helped there too.

When I was discharged, my husband and I googled The Head Ache Clinic and immediately booked an appointment. I came for assessment and subsequent treatment on the 28th of September. The staff at the Headache Clinic were amazing. They ushered me from the Neurologist to the different nursing sisters available with patience and professionalism.

I got my PMA fitted the next day and was wondering if I would ever get used to wearing it. The PMA worked like a charm. Unfortunately I chipped my PMA and had to get it replaced within 2 weeks of getting it.

Since getting the PMA I am able to leave a "NORMAL" life again. It's so wonderful to feel good all the time. Hats off to your medical staff that is continuously helping people live a better and more productive life. I don't take time off because of migraine headaches.

VIVA PMA, VIVA. I am recommending your natural treatment to all my friends and family.

Who knows I may just become your agent in Botswana.

Yours Sincerely

Mrs H Mapfumo.
